Abstract: The presented sample library of violin sounds is designed as a tool for the research, development and testing of sound analysis / synthesis algorithms. The library features single sounds which cover the entire frequency range of the instrument in four dynamic levels, two-note sequences for the study of note transitions, and solo pieces and scales. All parts come with hand-labeled segmentation ground-truth files which mark attack, release and transition/transient segments. Additional relevant information on the samples' properties is provided for single sounds and two-note sequences. Recordings took place in an anechoic chamber with a professional violinist and a recording engineer, using two microphone positions. This document briefly describes the content and structure of the data set.

1. Content Description

The TU-Note library of violin sounds consists of three parts:

1. single sounds
2. two-note sequences
3. solo: pieces and scales

1.1. Single sounds

The 336 single sounds stem from different positions on each string, in 4 different dynamic levels. The file `File_Lists/list_Single.txt`, which is also included in Section A of the Appendix, features the complete file list in tab-separated format with the relevant features of each item (string, position, MIDI note value, ISO-Pitch, dynamic label, precalculated F_0 in relation to 443 Hz). The assignment of single sounds to MIDI note values is listed in `File_Lists/sample-assignment.txt`, as well as in Section B of the Appendix.

1.2. Two-note sequences

A total of 344 two-note sequences utilizing different intervals, dynamics and articulation styles was recorded. All two-note items are listed in `File_Lists/list_TwoNote.txt` with additional information and also included in Section B of the Appendix.

1.3. Solo: pieces and scales

The solo section includes six scales and six solo pieces. Two scales were each played in three interpretation styles, as listed in Table 1. Six solo pieces and excerpts, listed in Table 2 which mostly contain cantabile legato passages were proposed by the violinist.

Table 1: Scales in the solo part

Solo Item	Type	Interpretation
01	major, ascending	plain
02	major, ascending	expressive 1
03	major, ascending	expressive 2
04	minor, descending	plain
05	minor, descending	expressive 1
06	minor, descending	expressive 2

Table 2: Compositions in the solo part

Solo Item	Composition	Composer
07	Sonata in A major for Violin and Piano	César Franck
08	Violin Concerto in E minor, Op. 64, 2nd movement	Felix Mendelssohn
09	Méditation (Thaïs)	Jules Massenet
10	Chaconne in g minor	Tomaso Antonio Vitali
11	Violin Concerto in E minor, Op. 64, 3rd movement	Felix Mendelssohn
12	Violin Sonata No.5, Op.24, 1st movement	Ludwig van Beethoven

2. Recording Setup

Recording took place in the anechoic chamber at SIM¹, Berlin and was conducted over two days.

2.1. Microphones

The following microphones were used:

- 1x DPA 4099 cardioid microphone
- 1x Brüel & Kjær 4006 omnidirectional small diaphragm microphone with free-field equalisation (hereafter BuK)

Format

All material was captured with a sample-rate of 96 kHz and a depth of 24 Bit. The included WAV files are truncated from the original recordings based on the segmentation files.

¹www.sim.spk-berlin.de

3. Data Structure

Each item in the database comes with a WAV file and a tab-separated text file containing segmentation. Content information is included in additional text files. Within the compressed file `TU-Note_Violin.zip`, the data is arranged as listed in Fig. 1.

Figure 1: Directory tree for the data in the archive `TU-Note_Violin.zip`

4. Segmentation

Segmentation was performed using the DPA microphone recordings and related files are thus named accordingly. Since delay differences are negligible, these segmentations are valid for the BuK recordings, as well.

4.1. Single sounds

All single sounds are labeled with four points, as shown in Table 3 with A, marking the beginning of the attack; C, marking the end of the attack and thus the beginning of the sustain; D, marking the end of the sustain and respectively the beginning of the release and B, marking the end of the release. A and B also mark the files' beginning and end and are thus redundant. The left column contains the related time instants in seconds.

Table 3: Example for a single-sound segmentation file (`SampLib_DPA_01.txt`)

0.000000	A
0.940646	C
7.373000	D
8.730500	B

4.2. Two-note sequences

All segmentation files for all two-note sequences are structured as shown in Table 4. They contain the the segments *Note* (1) – representing the steady-state part of a tone, *Rest* (0) – representing a silent part and *Transition* (2) – representing transient and unsteady portions, such as attack, release or note transitions, including glissandi. The left column contains the related time instants in seconds.

Table 4: Example for a two-note segmentation file (`TwoNote_DPA_08.txt`)

0.000000	0
0.170667	2
0.447667	1
3.390927	2
3.522094	1
6.920135	2
7.934958	0

4.3. Solo

Solo passages are labeled in the same manner as two-note sequences, but without a leading rest segment.

Acknowledgements

The authors would like to thank the violinist, Michiko Feuerlein, and the sound engineer, Philipp Pawlowski, for the great support during the recordings, as well as Moritz Götz and Benjamin Wiemann for the help in annotating the data.
