General Information

This database holds tempo data from 50 performances of Beethoven's famous piano sonata Op. 57, also known as the *Appassionata*. Different versions of the score are for example freely available from the Petrucci Music Library (<http://imslp.org>). For further study, we recommend to either use the edition from Heinrich Schenker including bar numbers, or the edition from Arthur Schnabel including his tempo annotation. This document details the content, structure, and acquisition of the database (last checked Feb. 2018). In case you are using any of this data, please refer to

Fabian Brinkmann and Heinz von Loesch, "Tempo data from 50 performances of Beethovens Appassionata (Op. 57)." <http://dx.doi.org/10.14279/depositonce-7002>.

The data is provided under a Creative Commons share alike license (CC-BY-SA, <http://creativecommons.org/licenses/by-sa/4.0/>). If you are interested in results of the tempo analyses, please refer to the related publications.

Database acquisition

The beginning of each bar in seconds was manually marked with utmost caution using [Sonic Visualiser](#). Before the data were exported to text files, each annotation was double checked by an ever identical expert. Matlab was used to calculate the duration T of the bars in seconds, from which the tempo in beats per minute (BPM) was obtained by

$$\text{BPM} = \frac{60}{T} \cdot 4.$$

Averaging the tempo of several performances was done by averaging T in a first step, and calculating the corresponding tempo in a second.

Tempo data

The tempo data is saved in comma separated values (csv) text files, where each column holds the data of one performance. The first row is named according to the performer and the recording year. Three types of data are provided:

`Beethoven_Op57_Beginnings.csv` holds the start time of each bar in seconds. The second column holds the start time of the first bar, etc.

`Beethoven_Op57_Durations.csv` holds the duration of each bar in seconds. Note that no duration is given for the last bar. The first column contains the duration of the first bar, etc.

`Beethoven_Op57_Tempi.csv` holds the tempi for each bar in beats per minute (BPM). Note that no tempo is given for the last bar. The second column holds the tempo of the first bar, etc.

Creating and interpreting tempo figures

A selection of tempo figures is contained in this database for your convenience. They were created with Matlab and the script `create_figures.m`. The horizontal axes of the figures show the bar number, while the vertical axes gives the tempo. For better orientation, the *Formteile* are marked by means of vertical lines. The tempo-values of the bars were connected by lines to improve readability. Note that the tempi were only assessed on a bar level, i.e. if the line falls from one bar to another, it does *not* mean that the tempo decreases during the corresponding bar.

Acknowledgement

We would like to thank all students that helped with annotating the start times of the bars.

List of performances

Recorded	Performer	Record label & Label code
1927	Harold Bauer	APR 7302 A
	Frederic Lamond	Biddulph LHW 043
1932	Wilhelm Kempff	HISTORY 20.3163-306
